Global public sector expertise

We deliver public sector facilities to central and local authorities and government agencies around the world. Our portfolio ranges from infrastructure assets and prisons to regeneration and road projects.

As recognised global leaders in transport modelling, we provide strategic advice to major government transport agencies. We also offer significant expertise in complex PPP/PFI programmes in the road, education, health and defence sectors.

In addition, we are a leading designer of government buildings and have worked on a variety of high-profile projects. From multiple stakeholder interests to heritage and environmental considerations, we understand the challenges of public sector developments.

Strategic services and strong relationships

We offer a range of strategic and technical services, such as transport modelling, street lighting, property asset management and school design. We enjoy long-term relationships with cities and municipalities throughout the world, from Helsinki to Dubai and New York to Tripoli.

Through our aid business, we also work closely with governments via organisations such as the Asian Bank, ERDB and World Bank, with projects in areas such as Afghanistan, Bangladesh, Yemen and Serbia.

For more information please [contact us](#) to talk to our directors.
